Class: D20C **Roll.No:** 35

Experiment No.4

Aim: Experiment no 4: Creation of account in Metamask, Transfer of amount/Cryptocurrency from one account to another.

Theory
MetaMask is a cryptocurrency wallet that allows users to create and manage blockchain accounts and interact with decentralized applications.

Each MetaMask account has:

- **Public Address:** Used to receive cryptocurrency.
- **Private Key/Secret Recovery Phrase**: Used to control and recover the account. It must never be shared.
- **Wallet Balance:** Amount of cryptocurrency owned by the account.

A cryptocurrency transfer involves:
Sender → Blockchain Network → Receiver

The sender creates and signs a transaction using their wallet. The transaction is then processed by the blockchain network and the cryptocurrency is transferred to the receiver's address.

Note: *For this experiment, a testnet cryptocurrency such as Sepolia ETH can be used because it has no real monetary value.*

Procedure
Step 1: Install MetaMask

- Open the official MetaMask website.
- Install the MetaMask browser extension.
- Add the extension to your browser.
- Open MetaMask.

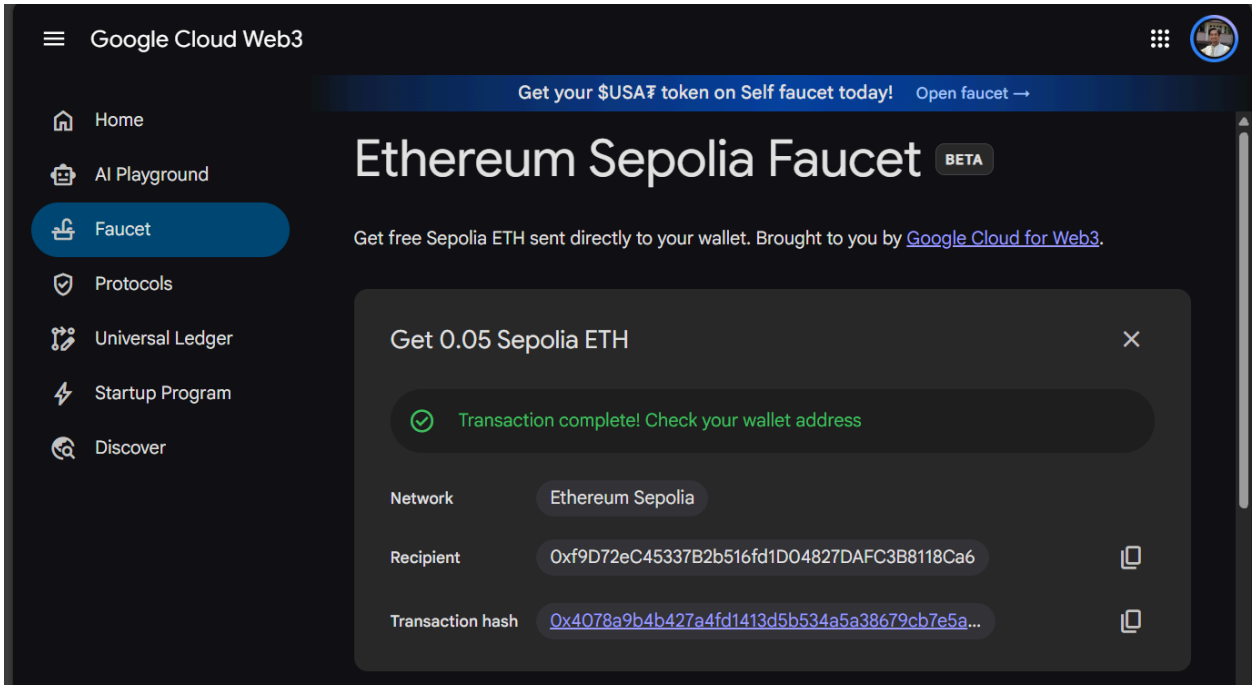

Step 2: Create a MetaMask Wallet

- Select Create a new wallet.
- Set a strong password.
- MetaMask will display a Secret Recovery Phrase.
- Write the recovery phrase down and store it securely.

- Confirm the phrase when MetaMask asks.
- Your wallet/account will be created.

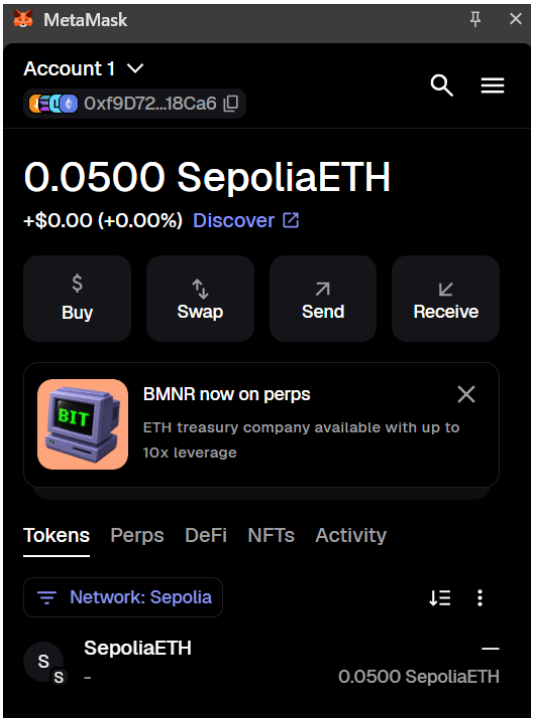

Step 3: Enable a Test Network

- Open MetaMask.
- Open the network selector.
- Select Sepolia test network.
- Confirm that the wallet is connected to Sepolia.

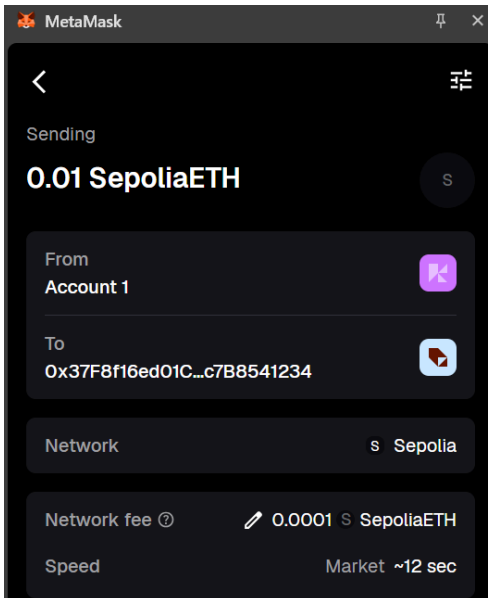

Step 4: Transfer Cryptocurrency

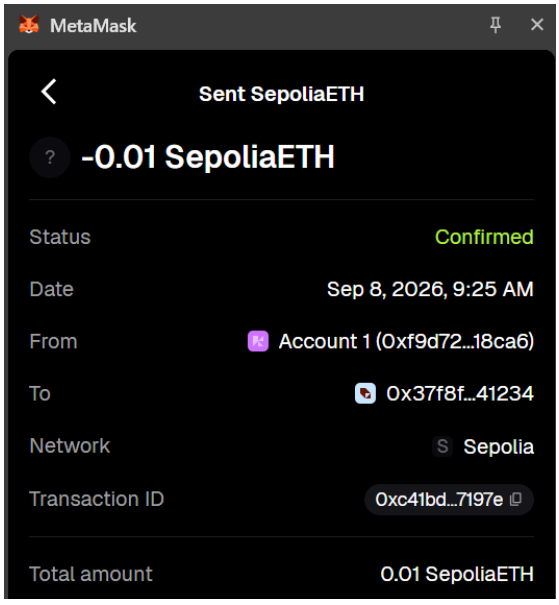

- Switch to Account 1.
- Click Send.
- Enter the public address of Account 2.
- Enter the required amount of Sepolia ETH.
- Review the transaction details.
- Click Confirm.

Step 5: Verify the Transaction

- Switch to Account 2.
- Check the received cryptocurrency.
- Open the transaction details.
- Note the Transaction Hash.

Conclusion: Thus, a MetaMask account was successfully created and cryptocurrency was transferred from one account to another using the Sepolia test network.
